(Pvt) Ltd.

COMPANY PROFILE

**Plot # E - 142 Sindh Industrial Area (Phase II)
Northern Bypass Super Highway Link Road,
Karachi - Pakistan**

**Cell: +92 332 8251945 | +92 332 8253574
Website: www.aijaz.biz | Email: team@aijaz.biz**

AIJAZ Industries (Pvt) Ltd. is now a leading name in the field of retail and industries for its shelving, racking and display systems. It has reached this status by providing quality product and after sales services. This has not been achieved in days or months; behind this is a thoroughly devoted team having more than 40 years of experience.

Our transparent business deals and prompt response to the queries of our clients have gained us customer satisfaction and reputation in the market.

The furniture and equipment's are locally manufactured at our factory. We have our own design and manufacturing facilities on the premises which allow parts to be made and/or altered quickly. Leveraging on our state-of-the-art infrastructure and a qualified and capable team of professionals, we have been providing our clients with complete display solution complying international quality standards. **Our Uprights and Beams for Industrial Racking are manufactured through fully automated roll forming production lines.** We are the pioneers in establishing such production facility in Pakistan.

We offer our clients with a wide variety of display and storage racks for commercial as well as industrial purposes. These are manufactured using qualitative CRCA Steel pre-treated in tank with degrease and zinc phosphate process before applying powder coating. This helps in ensuring the durability and optimum strength of the finished products. Moreover, we also use different grades of mild steel, aluminum, glass, wood, rubber and plastic as raw material.

We not only make customized racks but our racking and shelving is also trailer made, which means the proper use of space.

These are the salient features of our products • Quality design • Maximum storage space • Durability • Quality finishing
• Multi-purpose functionality • Easy to install • Minimum maintenance required

Our products work well with • Supermarkets • Retail showrooms • Display centers • Warehouses

Moreover, to provide complete assistance to our clients, we also provide installation of these display and storage racks at client's site.

AIJAZ - Racking Features

Speed Lock Features

AIJAZ - Speed lock pallet racking system is the most technologically advanced pallet storage system specifically designed to accommodate the latest changes and amendments to the international racking codes. It is a leading edge design that is first in terms of being globally compatible and globally available for end users all over the world.

The pallet racking offered is manufactured to international industry pallet racking standards using automated high tolerance precision state of the art roll forming machinery. The pallet racking comes in comprehensive range of upright grades and beam sizes to optimize pallet racking design based on end-user's unit load requirements.

All pallet racking components are designed, manufactured and supplied to high tolerance standards.

Wide/ Narrow Aisle Pallet Rack

Pallet racks are the primary storage component of most warehouses. Appropriate for both light duty and heavy duty applications, a well designed rack storage system is dynamic and reduces the overall cost of handling product in your organization. The correct storage solution will increase storage density without compromising selectivity or efficiency. Our team of experts will evaluate your requirements and provide the correct storage strategy for your organization.

Double Deep Pallet Rack

Double Deep is similar to selective racking; but pallets are now stored two rows deep instead of one. This type of racking therefore requires specialized pallet handling equipment using either a specialized forklift or a standard unit with double deep handling attachment.

The most common forklift used for double-deep handling is a reach truck. One key disadvantage with reach trucks is that they require a counterbalance for loading and unloading the pallet onto trucks, which can double capital investment requirements for your pallet handling equipment.

Long Span Shelving

The optimal system for manually storing small to medium-size products. This product is versatile, given its adaptability to any type of unit load; selective, as it allows immediate access to all unit loads and/or references stored; and dynamic, since it is easily assembled and/or disassembled, and components are also easily replaced and/or added.

Mezzanine Floor Racking

A Mezzanine floor is a raised platform that is supported by racking columns and is totally independent of the host building. It allows you to create additional floor space from wasted air space above existing work and storage areas and can be used to create storage.

Slotted Angle Racking

Slotted Angle Racks are used widely in offices, factories, libraries, kitchens, etc., for stacking files or bulk documents and in kitchens for placing and stacking utensils.

By simply adding steel shelves to slotted angle uprights, you'll find a near-infinite number of height, depth and length combinations. Slotted angle is cost-effective and flexible to stow a wide variety of items.

Multi-Tier Racking

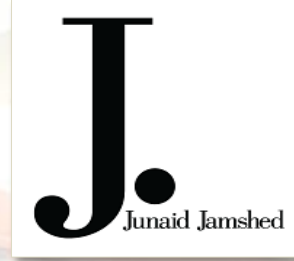

The Multi-Tier Racking System is the optimal solution for manual storage where available space is limited. Therefore, this storage system is selective, as it allows immediate access to all unit loads and/or references stored; and versatile, given its adaptability to any type of unit load.

This storage system provides excellent maximization of height by creating different aisle load levels high which are accessed by means of stairs.
